4. Salesforce Certified Marketing Cloud Email Specialist ([3106620](#))
5. Salesforce Certified Marketing Cloud Administrator ([3160614](#))
6. Salesforce Certified Administrator ([3747398](#))

ABOUT ME

Experienced developer with 5 years of expertise in building scalable full-stack solutions over Salesforce platform.

WORK EXPERIENCE

Senior Salesforce Developer

Twistellar, Jul 2024 – Present

Legacy Migration: Played a key role in replacing the legacy CloudSense package with Salesforce CPQ for a US data center provider and introducing a new lifecycle for ordering and order processing.

Customer Portal: Rebuilt the portal from scratch on Experience Cloud and LWC, replacing the legacy Visualforce site, with every component designed around a complex security hierarchy.

Self-Service Ordering: Delivered the end-to-end customer journey, from sign-in to placing, tracking, changing and cancelling orders.

Apex: Integrations, triggers and automation for the order lifecycle.

Web3 Developer

Self-employed, Dec 2023 – Present

Blockchain Integration: Develop decentralized applications (dApps) with focus on smart contract interactions

TON Ecosystem: Build applications on TON blockchain using JS/TypeScript and specialized libraries

Salesforce Developer

Twistellar, Jul 2021 – Nov 2023

Projects: CRM rollouts for North American auto dealer groups: custom Apex and LWC plus standard automation (Flows).

Team Lead: Led small teams of developers and testers for several months: requirement gathering, task decomposition, effort estimation, code review and delivery to clients.

CI/CD Pipelines: Configured CI/CD pipelines on Bitbucket for seamless deployment across sandboxes and production environments.

Apex: Integrations, triggers and business process automation.

Node.js: Built services that worked around Salesforce platform limits, including two-way integrations with third-party systems over SFTP and REST APIs. Hosted on Heroku and DigitalOcean.

PDF Generation: Built a Node.js module for PDF generation, since Visualforce PDFs did not work on mobile and were hard to customize.

Frontend Development: Built complex, multiscreen interfaces using LWC, Aura, and Visualforce.
